

## ITDB & viTronic – Quality assurance software

### Product description

This database-supported software simplifies quality assurance to a considerable degree.

The basis for this is the ITDB database module for storing test result data. With the help of our viTronic software module, we offer simple and clear access to the determined test data, including various evaluation functions, displays and export options. There are three different versions possible, which are nevertheless always aligned to your specific requirements.

### Field of application

Quality assurance in the area of production and manufacturing.

## ITDB & viTronic – Quality assurance software
